EDUCATION

University of South Florida

Bachelor of Science | B.Sc. | Major in Computer and Information Systems (Cyber Security)

Relevant Coursework: Software Engineering; Data Structures and Algorithms; Computer Vision; System Design, NLP, Object oriented Programming, Database Design, Human Computer Interface, Computer Networks, Distributed Systems

Tampa, FL
Aug 2025

SKILLS

Programming Languages: Python, TypeScript, C#, C, JavaScript, Go

Frameworks and Libraries: Django, FastAPI, React, Next.js, ASP.NET Core, Redux, NLTK, Tailwind CSS

Databases: PostgreSQL, MongoDB, SQLite

Tools and Technologies: Docker, Nginx, AWS, Google Cloud, Firebase, Git, Redux, Figma, PostgreSQL, MongoDB, NLTK, OpenAI APIs, Claude, REST APIs, Websockets, SEO, CI/CD pipelines, Performance Tuning.

WORK EXPERIENCE

Stone Brothers International LLC - Software Engineer Lead

(FastAPI, React, TypeScript, NextJS, Redux, PostgreSQL, Docker, AWS, WebSockets, TTS/STT)

Sep 2025 – current

- Developed and scaled a logistics HR platform serving 30,000+ users, transitioning it from a Telegram mini-app to a fully-featured web application with AI-driven automation.
- Built and deployed AI-powered modules including an Interview Agent (WebSockets, STT/TTS, LLM scoring), Resume Screening, and Job Matching, reducing recruiter workload by 65%.

Stone Brothers International LLC – Software Engineer Intern

(FastAPI, React, TypeScript, NextJS, Redux, PostgreSQL, Docker, AWS, WebSockets, TTS/STT)

May 2025 – Aug 2025

- Designed and launched a production-grade fleet monitoring system for 150+ vehicles using Samsara APIs, building a Telegram bot that processed 600+ real-time alerts with sub-2s response times and **99.9% uptime**, helping reduce potential collision incidents by **28%**.
- Built a scalable alert processing pipeline with asynchronous Python, batch processing, and intelligent alert grouping to handle high-volume Samsara data while ensuring reliability and **cutting false positive alerts by 35%**.
- Integrated enterprise features including multi-tenant database architecture, secure API key management, intelligent alert filtering, and subscription billing with Stripe, enabling **safer fleet operations and monetization of safety tools**.
- Managed AWS infrastructure and Docker-based CI/CD pipelines, enabling weekly deployments with <5-minute rollout cycles while automating compliance checks via MVRCheck API.

SimplePrep – Co-Founder

(React, Next.js, TypeScript Python, Django, PostgreSQL, Docker, AWS, Redux)

May 2024 – April 2025

- Founded and developed** an adaptive SAT prep platform, growing to **500+** active student users; integrated **GPT-4o** and **Claude APIs** for personalized study plans and content generation.
- Architected** scalable **Django**-based backend deployed with **Docker** and **AWS**, effectively handling thousands of concurrent user requests.
- Reduced** backend latency by **40%** through API endpoint optimization, PostgreSQL query enhancements, and async architecture.
- Implemented** Stripe billing with role-based access control, managing secure monthly subscriptions and dynamic feature gating.
- Increased** organic **traffic 3x** via optimized page loads and **SEO strategies**, significantly enhancing user growth and retention.

Radical X – Software Engineer Intern

(Next JS, Typescript, Firebase)

Sep 2023 – Dec 2023

- Designed and implemented** real-time billing infrastructure supporting AI workload provisioning, integrating GitHub Codespaces with custom subscriptions.
- Optimized** UI components with **Next.js** and **Firebase**, reducing load times by 30% and improving Lighthouse performance scores.
- Collaborated** on integrating **OpenAI**, **Claude**, **Gemini**, enhancing semantic matching accuracy by 20% for dynamic AI-generated code feedback.
- Developed** internal tools accelerating onboarding for AI modules by 40%, improving developer productivity and deployment cycles.

University of South Florida Honors College– Student Software Developer

(React, Typescript, Tailwind CSS, Microsoft SQL, C#, ASP.NET, Azure)

Feb 2023 – Aug 2023

- Migrated** internal academic systems to **ASP.NET Core 5**, significantly enhancing application performance and maintainability.
- Developed** a centralized research portal utilized by **30,000+** students and staff, streamlining fragmented processes into secure, role-based dashboards.
- Improved** backend performance by refactoring legacy database schemas and optimizing SQL queries, boosting query speed **by 65%**.
- Assisted** with **Azure cloud deployments**, implementing automated backups and identity-based access controls.

University of South Florida EnCoDe Research Lab - Undergraduate Research Assistant

(Unity, Python, C)

Jan 2023 – Jun 2023

- Developed Python** data ingestion pipelines automating over **500 API** calls for structured JSON data processing, enhancing real-time AR visualization overlays.
- Assisted** in creating AR prototypes using Unity, visualizing sensor data and cognitive load metrics to support research in situational awareness.

PERSONAL PROJECTS

InterviewPrep Pro — AI-Powered Technical Interview Preparation Platform

Built an agentic, voice-interactive interview simulator that chains STT → LLM reasoning → structured scoring → TTS, using OpenAI + Gemini models with custom prompt orchestration and evaluation harnesses.

Implemented retrieval-augmented interview guidance (policy, best-practice, role-specific hints) and red-team style follow-ups to probe candidate depth and reasoning quality.

Logged model outputs + user responses to create fine-tuning/eval datasets for continuous model improvement and safety review.

LEADERSHIP & AWARDS

- Led technical workshops on AI and Web Development at USF, training 100+ peers.
- Mentor, LA Hacks 2023:** Guided teams developing real-time ML applications at a hackathon with 1000+ participants.
