EDUCATION

University of South Florida Tampa, FL

Bachelor of Science | Major in Computer and Information Systems (Cyber Security)

Aug 2025

Relevant Coursework: Data Structures and Algorithms, System Design, Distributed Systems, Computer Networks, NLP, Computer Vision, Object-Oriented Programming, Database Design, Human-Computer Interface

SKILLS

Languages: Python, TypeScript, C#, C, JavaScript, Go

Frameworks: Django, FastAPI, React, Next.js, ASP.NET Core, Redux, Tailwind CSS

Infra & Data: AWS, Docker, Nginx, GCP, Firebase, PostgreSQL, MongoDB, SQLite, CI/CD OpenAI, Claude, Gemini, RAG LangChain, agentic workflows, REST, WebSockets, STT/TTS

Problem Solving: 516+ LeetCode problems solved (<https://leetcode.com/u/coding802/>)

WORK EXPERIENCE

Datatruck, Inc. – Software Engineer

Feb 2026 – Present

(Python, Django, PostgreSQL, React, TypeScript, Claude Code, MCP, AWS, Docker)

- Lead agentic AI, safety, and client-migration initiatives across **15+ engineers** while shipping core product features
- Designed and shipped a 4-agent triage system now the default first step for on-call and support requests across **40+ engineers**; **91% verified accuracy** across **604 investigations**, up from **55%** on the first-generation agent it replaced, saving **200+ engineering hours weekly**
- Rebuilt dispatcher payroll system end to end (**Django REST Framework, PostgreSQL, React, TypeScript**), settlement aggregation, percentage and fixed pay structures, deductions, and statement generation
- Built an **SEO-** and **GEO-**optimized **Next.js** carrier lookup tool on a cached, **B-tree-indexed** FMCSA mirror, **2-3x faster** and outage-resilient, lifting inbound organic traffic **20%** and surfacing sales leads, while improving visibility in AI-powered search results
- Cut enterprise client migration time from **2 weeks to 4 days** with idempotent, dry-run-first record-matching pipelines (small-sample validation before full rollout) for driver, truck, trailer, and load records; authored best-practices guidelines now standard across the team; used to onboard **10+ enterprise clients**
- Built and lead org-wide adoption of Claude Code (skills, review subagents, automation hooks, path-scoped rules) spanning the full development workflow with adversarial review built in, driving a **30% increase** in engineering throughput
- Architecting an **MCP** server exposing TMS data to Claude Code and other agentic clients as a second front door alongside the REST API, tenant isolation from validated token claims, **OAuth 2.1** scope-separated read/write, allowlisted schemas with snapshot-test guarantees; read path shipped, write path in progress

Stone Brothers International LLC - Software Engineer & Software Engineer Intern

May 2025 – Feb 2026

(FastAPI, React, TypeScript, Next.js, Redux, PostgreSQL, MongoDB, Docker, AWS, WebSockets, Gemini Live API)

- Led **HuntME** from an empty repository to a platform run by **500+ logistics companies** with **31,000+ registered users** and **10,000+ job placements**, across **7 products** sharing **24 backend services**
- Built a real-time voice interview system on **Google's Gemini Live API** (WebRTC, live transcription, structured scoring) replacing first-round phone screens
- Shipped a RAG-backed support assistant with role-aware prompting, cutting ticket volume **40%** in the first quarter after launch
- Led a team of **4 engineers**; introduced unit testing standards and owned architecture, code review, and technology decisions
- Built a production fleet monitoring system for **150+ vehicles** processing **2500+ real-time weekly alerts** with **sub-2s response** and **99.9% uptime**, reducing collision incident rates by **28%**

SimplePrep – Co-Founder

May 2024 – April 2025

(React, Next.js, TypeScript, Python, Django, PostgreSQL, Redis, Docker, AWS)

- Founded and built an adaptive SAT prep platform to **500+ active students**; integrated GPT-4o and Claude to target practice at each student's specific weak skills
- Architected a Django/DRF backend on AWS with Docker; cut backend response time **40%** through endpoint restructuring, PostgreSQL optimization, and Redis caching
- Owned the full stack solo — Stripe billing, student analytics — while growing organic traffic **3x** through page-speed and SEO work

University of South Florida Honors College – Student Software Developer

Feb 2023 – Aug 2023

(React, TypeScript, Tailwind CSS, C#, ASP.NET Core, Microsoft SQL, Azure)

- Built a centralized research portal on ASP.NET Core 5 used by 30,000+ students and staff, replacing fragmented processes with secure, role-based dashboards
- Refactored legacy database schemas and optimized SQL queries, boosting query speed 65%
- Assisted with Azure cloud deployments, implementing automated backups and identity-based access controls

University of South Florida EnCoDe Research Lab — Undergraduate Research Assistant

Jan 2023 – Jun 2023

(Python, Unity, C)

- Built Python data-ingestion pipelines automating 500+ API calls for structured JSON processing, feeding real-time AR visualization overlays
- Assisted in building AR prototypes in Unity visualizing sensor data and cognitive-load metrics for situational-awareness research
